

Magic Fizzy Colors

You will need:

- Baking soda
- Vinegar
- Food coloring
- Pipette, eye dropper, or squeeze bottle
- Small bowl
- Muffin pan (preferably for mini muffins)

Step 1:

Add 1-2 drops of food coloring to the bottom of one of the muffin tins.

Step 2:

Cover the food coloring with a small amount of baking soda. Make sure none of the color shows through!

Step 3:

Use your pipette, eye dropper, etc. to suction up some of the vinegar. (This is great fine motor practice for little ones!)

Step 4:

Squeeze your dropper over the baking soda to reveal the hidden color!

Step 5:

Try multiple colors.

What happens if you mix the primary colors of red and yellow together?
